

KDS' software for SMEs

What makes KDS the reference Travel and Expense solution?

Native integration

Our software is not simply an online travel booking service added to an expense module, but a single service, built from the ground up by one development team, to allow data and processes to flow seamlessly between the different parts of the T&E cycle.

Leveraging our full visibility over all T&E processes we are able to propose powerful monitoring features such as reporting and audit systems to fully leverage your T&E database.

The cost killer in the cloud

Our small and medium enterprises travel and expense management solution brings constant innovation to optimize processes and reduce infrastructure, process and buying costs to the lowest possible levels.

Since 2000, long before "cloud computing" was talked of, our hosted solution has enabled companies to deploy our systems quickly with minimal IT support or infrastructure cost. The model is simple, you focus on your key business and benefit from our expertise at servicing your T&E needs.
